DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the illuminated mouse as set forth in claim 26 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claim 26 is rejected under 35 U.S.C. 102(e) as being anticipated by HOWELL (5,899,553). Howell shows in Fig.3 a handheld device with push buttons "64" and an electroluminescent lamp sheet "64" which has an optically transmissive top sheet "103"

Art Unit: 2875

as shown in Fig.9B. Howell further discloses in column 2, lines 12-36, that the electroluminescent panel may be applied to any underlying device having finger activated push buttons such as a computer keyboard which is a computer input device like that of a mouse. Further it is noted that claim 26 does not positively set forth any mouse structure and is merely mentioned in the claim's preamble.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kuenster et al. shows a wearable computer having a mouse 12, which is illuminated by an electroluminescent display 58 as shown in Fig.3. The Howell reference cited above has not been furnished, as it constitutes prior art cited by applicant in the information disclosure document received 1/14/01.
